TELEPHONY SERVICES

Powerful calling features to help your team connect, engage & convert more leads.

AI CALLING

Smarter Calls. Stronger Conversations. Better Results.

AI CALLING

Automate customer outreach with intelligent AI Voice Agents. Create custom agents, set their tone, instructions & preferences, manage contacts easily, and start **AI-powered calls** from your CRM in just a few clicks.

AI CALL LOGS

Get a complete history of all AI calls in one place. Track call status, duration, recordings, transcripts, timestamps, and AI summaries. Analyze outcomes, monitor AI performance, and ensure quality with **rich insights**.

CALL SCHEDULING

Schedule calls at the best time, update or reschedule existing calls, or cancel pending ones anytime before execution for full **operational flexibility**.

AI CAMPAIGN MANAGEMENT

Create, schedule & manage outbound AI calling campaigns. Choose contact lists, assign AI agents, set caller IDs, pace & working hours, and monitor real-time performance with **powerful analytics**.

HYBRID MODE

1. New Lead Added

A new lead is added to the CRM.

2. Agent Unavailable

If the assigned agent is unavailable...

3. AI Takes Over

AI Voice Agent automatically calls the lead.

4. Conversation & Capture

AI conducts the conversation and captures the information.

5. Agent Follows Up

Once available, the agent reviews the call recording & transcript to continue the follow-up.

Meta CAPI & Google Offline Conversions

HOW IT WORKS

KEY PROCESS DETAILS

01

Tracking Identifier Ingestion

iBanify CRM captures and stores click identifiers: GCLID for Google Ads and FBCLID for Meta Ads.

02

Lead Qualification in the CRM

Sales representatives review incoming leads and update their status as **Relevant**, **Irrelevant**, or **Undecided** based on evaluation.

03

Automated Server-to-Server Sync

Once a lead is marked as Relevant, the CRM automatically sends conversion data to:

- Google Offline Conversion API (via GCLID)
- Meta Conversions API (CAPI) with hashed customer identifiers

KEY BENEFITS

Precision Ad Attribution:

Direct integration with Google Offline Conversions and Meta CAPI ensures high event match rates without relying solely on fragile browser cookies or client-side pixels.

Higher Conversion Quality:

Shifts campaign goals from acquiring high lead quantity to driving actual pipeline value.

Reduced Cost Per Qualified Lead (CPQL):

Stops wasted ad spend on audience pools that produce low-quality or unreachable contacts.

Fully Automated Feedback Loop:

Completely eliminates manual CSV exports, column mapping, and upload delays—all conversion events push automatically in real time.
